SUMMARY

AI Engineer and Full-Stack Developer specializing in Agentic AI, Multi-Agent Systems, and LLM-powered applications. Experienced designing production-grade LangGraph workflows, RAG pipelines, and hybrid local/cloud AI systems. Seeking to build reliable, evaluation-driven GenAI products at scale.

WORK EXPERIENCE

Technical Head – Ethicraft

2024 – Present

- Led a 4–6 developer team building the club’s official website end-to-end (Next.js + TypeScript, Supabase), owning architecture and deployment.
- Directed technical decision-making across 6+ shipped features (auth, payments, admin dashboard, event management), serving 300+ active users.

PROJECTS

Globe Express – Multi-Agent Travel Orchestration Engine

[Live Demo](#) | [Code](#)

- Engineered a stateful multi-agent trip-planning system in LangGraph, using specialized agent nodes, conditional routing, and shared memory to coordinate flight search, weather, and itinerary generation.
- Implemented automated validation, retry logic, and LLM fallback across AviationStack, Tavily, and wttr.in integrations, increasing resilience against external API failures.
- Orchestrated asynchronous request handling via FastAPI and PostgreSQL, with PDF itinerary export and a React frontend, to minimize end-to-end planning latency.
- Enforced type-safe data flow between LangGraph nodes using Pydantic schema validation on structured LLM outputs, catching malformed agent responses before they reached downstream services.

Nivana – Privacy-First AI Mental Health Platform

[Live Demo](#) | [Code](#)

- Architected a hybrid local/cloud LLM system with RAG retrieval over a FAISS vector store, combining on-device inference via Ollama (Llama 3) with cloud reasoning through Gemini 1.5, balancing privacy with response quality.
- Engineered an asynchronous processing pipeline with Flask + Celery to handle real-time mood analysis without blocking the main request thread.
- Designed a React SPA with real-time mood visualization, focused on accessible, low-friction UX for users in vulnerable states.

LinkedIn Post Generator – GenAI Content Tool

[Live Demo](#) | [Code](#)

- Built a GenAI content generator (Python, Streamlit, LangChain, Groq) that produces multiple LLM-generated post variants from a user-defined topic, tone, length, language, and hook style.
- Integrated Tavily for live context retrieval, adding a RAG layer that keeps generated content relevant and current, with prompt engineering and few-shot learning driving output quality.

Ethicraft Club Website – Full-Stack College Management Platform

[Live Demo](#) | [Code](#)

- Engineered a full-stack platform (Next.js + TypeScript, Supabase Auth/DB) with role-based student/admin portals, Razorpay payments, and an online test/assessment module used by 300+ students.

EDUCATION

2024 – 2028 **B.Tech in Electronics & Telecommunication**, Pune Institute of Computer Technology (SPPU) GPA: 8.9

SKILLS

AI / GenAI:	LangGraph, LangChain, RAG, FAISS, Multi-Agent Systems, LLMs (Llama 3/3.1), Prompt Engineering, Vector Databases, Groq, Ollama, HuggingFace
Backend & APIs:	FastAPI, Flask, Celery, Node.js, Express.js, REST API Design
Frontend:	React.js, Next.js, TypeScript, React Native
Databases:	PostgreSQL, MongoDB, MySQL, Supabase, Firebase
Languages:	Python, C++, Java, JavaScript, TypeScript, C
Tools & Platforms:	Git/GitHub, Vercel, Docker, Razorpay, Streamlit
